

Pollution In Carson City

What's The Problem?

Pollution in Carson has been getting worse over time. Carson has multiple places that have a lot of pollution like the Carson River which is one of the most polluted waters in Nevada according to the RGJ.

How To Solve This Problem?

I propose an EVMS clean up crew that would go out and clean up the City every quarter. This would be a group of students that would help the Carson river. This group would be going during school hours and would be provided equipment to pick up trash at the river.

What Is There To Gain?

This could help the environment around us and for Eagle Valley. We could clean up multiple places in carson that risks the health of animals and some people. Reducing the trash in carson would affect the community around us.

Tools Needed

- 1 pack of 50 Trash bags \$20.97
- 1 nifty nabber trash picker 19.97 each
- 1 pair of Leather Work gloves 14.97 each (depending on size)
