

Why We Compost!

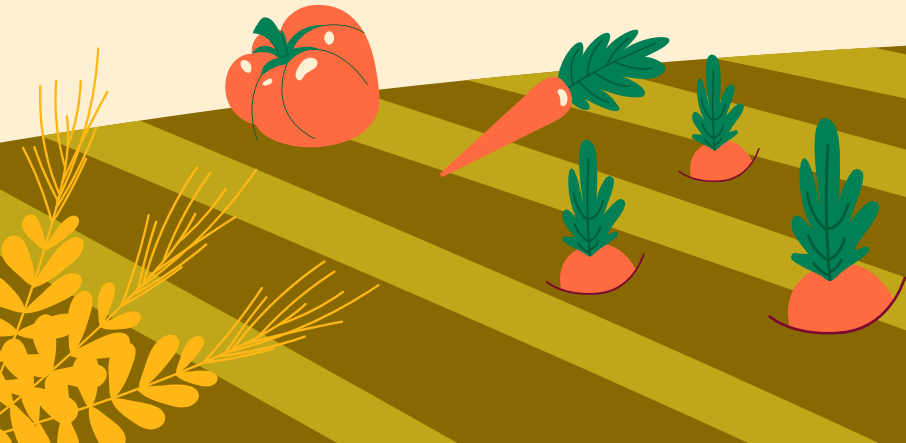

What is Compost and Why do we do it?

About 119 Billion Pounds of food is wasted in the U.S alone

That's a 48 billion dollars worth of food.

When We Compost...

We turn our food waste into usable material such as nutrient rich soil through a process called decomposition.

So What is Compost Anyway?

Compost is made when decomposing bacteria (small bugs) break down organic waste.

The useful nutrients released can then be used again in your garden!

How Can It Be Repurposed?

01 Flower and
Vegetable beds

02 Tree Beds

03 Soil for Lawns

04 Window
Gardens

Benefits

- **Less waste**
- **Healthy Environmental Impact**
- **Healthier Soil**
- **Reduction of Harmful Gases**
(methane and greenhouse gas)

THANKS!
